

Lantern

See what you sign.

A non-custodial Stellar wallet with an **AI safety net** between you and every signature — turning opaque transactions into plain-language decisions.

Self-custody asks users to sign things they can't read.

Opaque signatures

Wallets show raw XDR. Users approve trustline changes, signer removals, account merges & Soroban calls without knowing the impact.

Scams thrive on confusion

Phishing dApps, look-alike asset codes, unlimited token allowances and drained reserves — all hidden behind one "Approve".

No good option

Custodial = give up your keys. Non-custodial = fly blind. Nobody keeps keys on-device and explains the risk.

A wallet that explains every signature — before you make it.

- **Non-custodial by design.** Keys never leave the device — AES-GCM vault, PBKDF2 $\geq 600k$, decrypted key lives only in worker memory.
- **AI security scans.** Decode any transaction, summarize intent in plain English, flag irreversible & high-risk actions before signing.
- **In-wallet mini-app browser.** Run Stellar dApps in a sandboxed, permissioned container — every request routed through the scanner.

"A second pair of eyes at signing time."

Lantern never takes custody and never blocks you — it just makes sure you understand what you're authorizing.

AI Security Scanner

Opaque XDR in → an informed decision out.

Lantern · Review TESTNET

 **High-impact transaction**
operations · 2 warnings

Payment · 1,500 XLM
● To GDPR...X7QF — destination never seen before.

Remove signer
● ⚠ Irreversible — lowers account control.

Unlimited token allowance
●● ⚠ Contract could move this asset without limit.

Reject Approve

Transaction intent analysis

Decodes payments, trustlines, offers, merges & setOptions into human terms.

Soroban contract scanning

Inspects called contracts, args & auth entries — flags unlimited allowances & unknown authorizers.

Address reputation

Scam lists & homoglyph detection.

Origin checks

Catches spoofed dApp prompts.

On-device first

Opt-in cloud AI

Never sees secret keys

Mini-App Browser for Stellar dApps

A trusted, permissioned home for the Stellar ecosystem — identity & signing context travel with the user.

Sandboxed runtime

dApps load in an isolated frame with zero access to the vault — all chain calls go through a brokered, capability-scoped API.

Per-app permissions

Scoped & revocable: which network, which accounts, spend limits & allowed operations — reviewable in one place.

Every request runs through the scanner

Aligned with SEP-0043 / Wallet Standard & Soroban RPC — existing dApps integrate with minimal changes.

Stellar is scaling into smart contracts — and risk is scaling with it.

Soroban

Smart contracts are live on mainnet — far more ways for users to sign something they don't understand.

\$Bns

Lost annually to wallet phishing & malicious approvals across crypto — the #1 attack surface is the signature.

SEP-0043

Emerging wallet standards make a safety-first, interoperable wallet the natural integration point for dApps.

Wallets compete on UX today. The next wave competes on **trust**. Lantern is built for it from day one.

A shipping wallet today, a trust layer tomorrow.

BUILT & WORKING

- MV3 Chrome extension — create / import, send, balances, history
- Encrypted on-device vault, SEP-0005 HD wallet, Testnet / Mainnet
- Scan engine + messaging architecture scaffolded for AI review

BUSINESS MODEL

- **Free wallet** — grow the trusted install base.
- **Premium scans** — advanced cloud AI analysis for power users & teams.
- **Ecosystem** — verified dApp directory listings & a B2B safety API for anchors / dApps.

Founder

Mark Hugh Neri

Founder

- **15+ years** in software development — specialized in Blockchain & AI.
- **CTO / Co-founder, The Blocklabs Inc** — pioneering blockchain education in the Philippines since 2017.
- **Multiple global & local hackathon winner.**

Raising a pre-seed / angel round.

Funding the path from working wallet to a live AI safety layer & mini-app browser. Use of funds:

+ Ship the AI security scanner	40%
Mini-app browser & dApp directory	30%
Security audits & mainnet hardening	20%
Growth & ecosystem partnerships	10%

Light up Stellar safely.

Join us in building the trust layer for self-custody.
